Temperature
Controlled Solutions

samskip

> With a large fleet of 45ft pallet wide reefers, Samskip offers temperature-controlled transport across Europe.

Multimodal Network

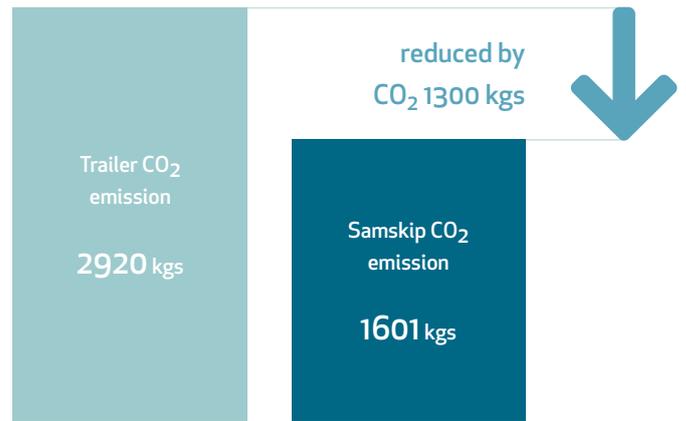

Samskip offers pan-European, environmentally responsible combined transport services via shortsea, road, rail and inland waterway routes. We are committed to cost-effectiveness, operational excellence and best practice in sustainable transport.

High frequency services connect destinations across Europe, transported using a wide range of owned vessels, trains, containers, trucks and trailers.

In all cases shippers can make real choices based on frequency of service, transit times, freight rates and sustainability.

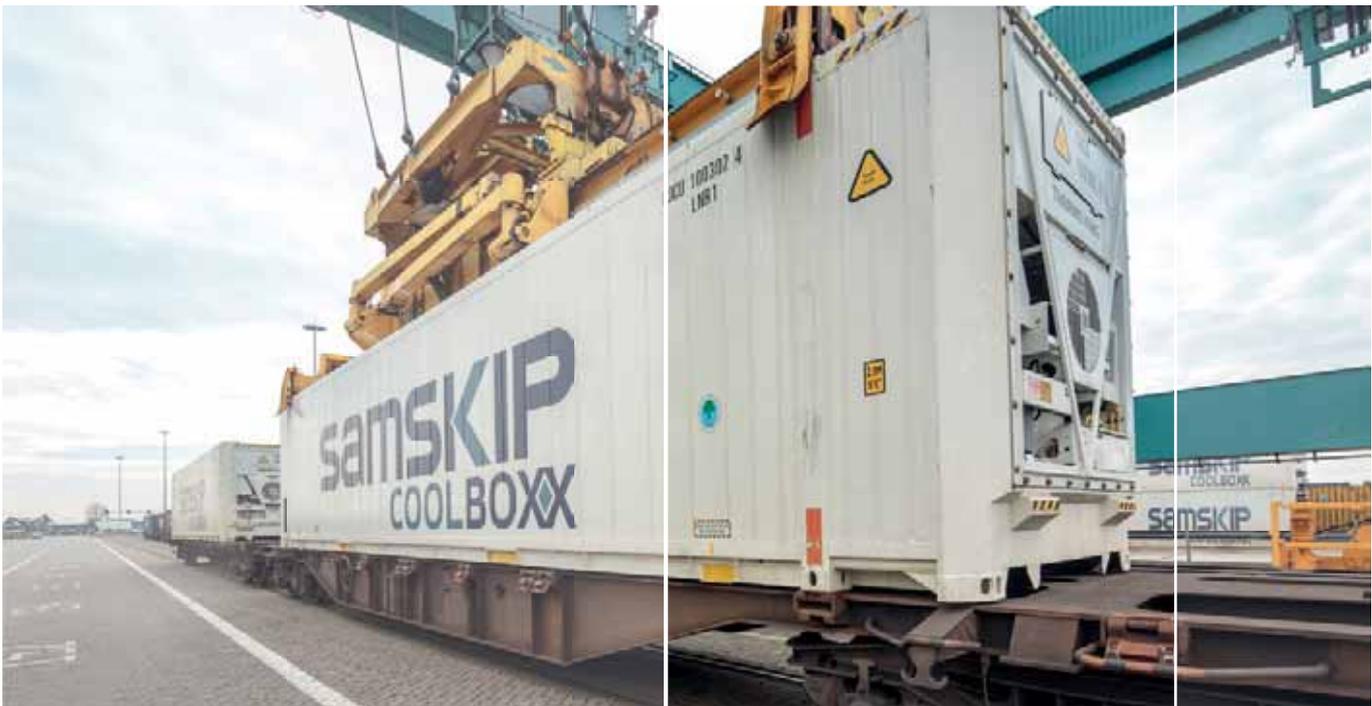

Sustainable Transport

Samskip is committed to delivering sustainable transport solutions. By efficiently combining the different transport modes, Samskip and its customers successfully take mileage off Europe's busy road network.

Temperature Controlled Solutions

Samskip has a large fleet of 40ft high cube and 45ft pallet-wide reefers available. The Samskip Coolboxx reefer offers an optimal combination of cost and transport efficiency as it holds 33 Euro pallets and can be used across our multimodal network.

Our reefers are able to safely transport all temperature sensitive or perishable products within the the range from -30°C to +30°C; e.g., fruit and vegetables, dairy products, meat, fish, flowers, plants, frozen foods, sweets, wine and pharmaceuticals.

Real-time track and trace management software is used to monitor and control the sensor-connected 45ft refrigerated container units whether they are awaiting pick-up or delivery, or moving anywhere in our logistics chain. Pre-trip inspections are straightforward and speedy, with the potential for human error minimized. Meanwhile, automated alarms warn of any potential risk of cargo damage ahead of time.

For the specifications please check out our Equipment brochure.

Plants and Flower Solutions

Our flora container allows plants and flowers to be transported in a sustainable manner, while guaranteeing a fast lead time, high payload, and cost-efficient pricing. The flora container has been developed to enable plants and flowers transport by multimodal rail. With an internal width of 2.50 metres and internal height of 2.78 metres the unit loads 43 flower trolleys, equalling conventional reefer trailer capacity.

Reefer containers offer similar capabilities as reefer trailers. From full service door-door transport to real-time position tracking and temperature monitoring. In addition, the payload is also between 23-25 tonnes.

Contrary to reefer trailers, our containers are less vulnerable to driving hour restrictions, traffic jams and Maut taxes.

When choosing these 45ft reefers you combine the payload of a trailer with the flexibility of a container. The air flow goes via the bottom of the container with electric reefers, and via the top for the diesel-electric ones.

Local Services, Customised Solutions

Our dedicated sales and customer service teams offer customers the expertise and experience needed. Furthermore, the services have been certified to ensure the utmost quality for the customers.

Unique Advantages

- » Access to extensive pan-European multimodal network
- » Large fleet of 45ft reefers for all modalities
- » Temperature control of your cargo
- » Reliable and competitive transit times
- » Sustainable transport – lower CO2 emissions
- » Real-time position tracking and temperature monitoring
- » Experienced and knowledgeable
- » Reefer containers with the same capacity and payload as reefer trailers
- » Less vulnerable to driving hour restrictions, traffic jams and Maut taxes
- » Temperature range between -30°C and +30°C
