

The one-stop solution for stone transport

After close cooperation with natural stone suppliers and importers Samskip is pleased to introduce new specialist stone-carrying 40ft A-frame flat-racks **designed with you in mind.**

Each multimodal unit features two custom-built A-frames to carry slabs of natural stone. These units, due to customer demand, can also accommodate combinations of slabs, crates and pallets – catering to all needs.

Benefits:

- **Greater access for loading and unloading.**
- The A-frames, being fixed integral parts of the unit, are not liable to shifting or slippage during transit, meaning **less possibility of damage to the valuable cargo.**
- After unloading the A-frames fold away into the floor for re-use so you have **no charges** for purchasing frames from the stone supplier or disposal costs after use.
- The unique design means that stone suppliers need only use straps, **a less expensive option** to the normal chains, for securing the stone to the slabs.
- The new units are CSC (Container Safety Convention) plated meaning they can move throughout the Samskip network by road, train, barge and short-sea vessel, truly multimodal, which can offer **improved payloads and track and trace benefits.**
- **Local Samskip offices oversee collection and deliveries** and have excellent regional knowledge of transport regulations and requirements.
