

Our seamless EDI solution

Grow your business to the next level with Samskip

Ease your business, connect with us via EDI

Step into the future with automated processes. An EDI connection allows you to further automate your internal processes and increase productivity and increase visibility into your supply chain. Real-time GPS track and trace of all end-to-end deliveries allows you to further automate your internal processes and increase productivity by pro-actively managing your own transport flows. Unforeseen issues can be spotted faster and the risk of human error is significantly reduced leading to better operational efficiency and performance.

Functionalities

Confirmations

Place your bookings via EDI and receive booking confirmations in your own system

Updates

Send us updates regarding existing bookings (cargo details, VGM, customs)

Status message

Receive event-based track&trace updates

Reporting & Invoicing

Receive performance reporting and electronic invoicing (XML or other)

All of these functionalities can only be offered in combination with placing your bookings via EDI
